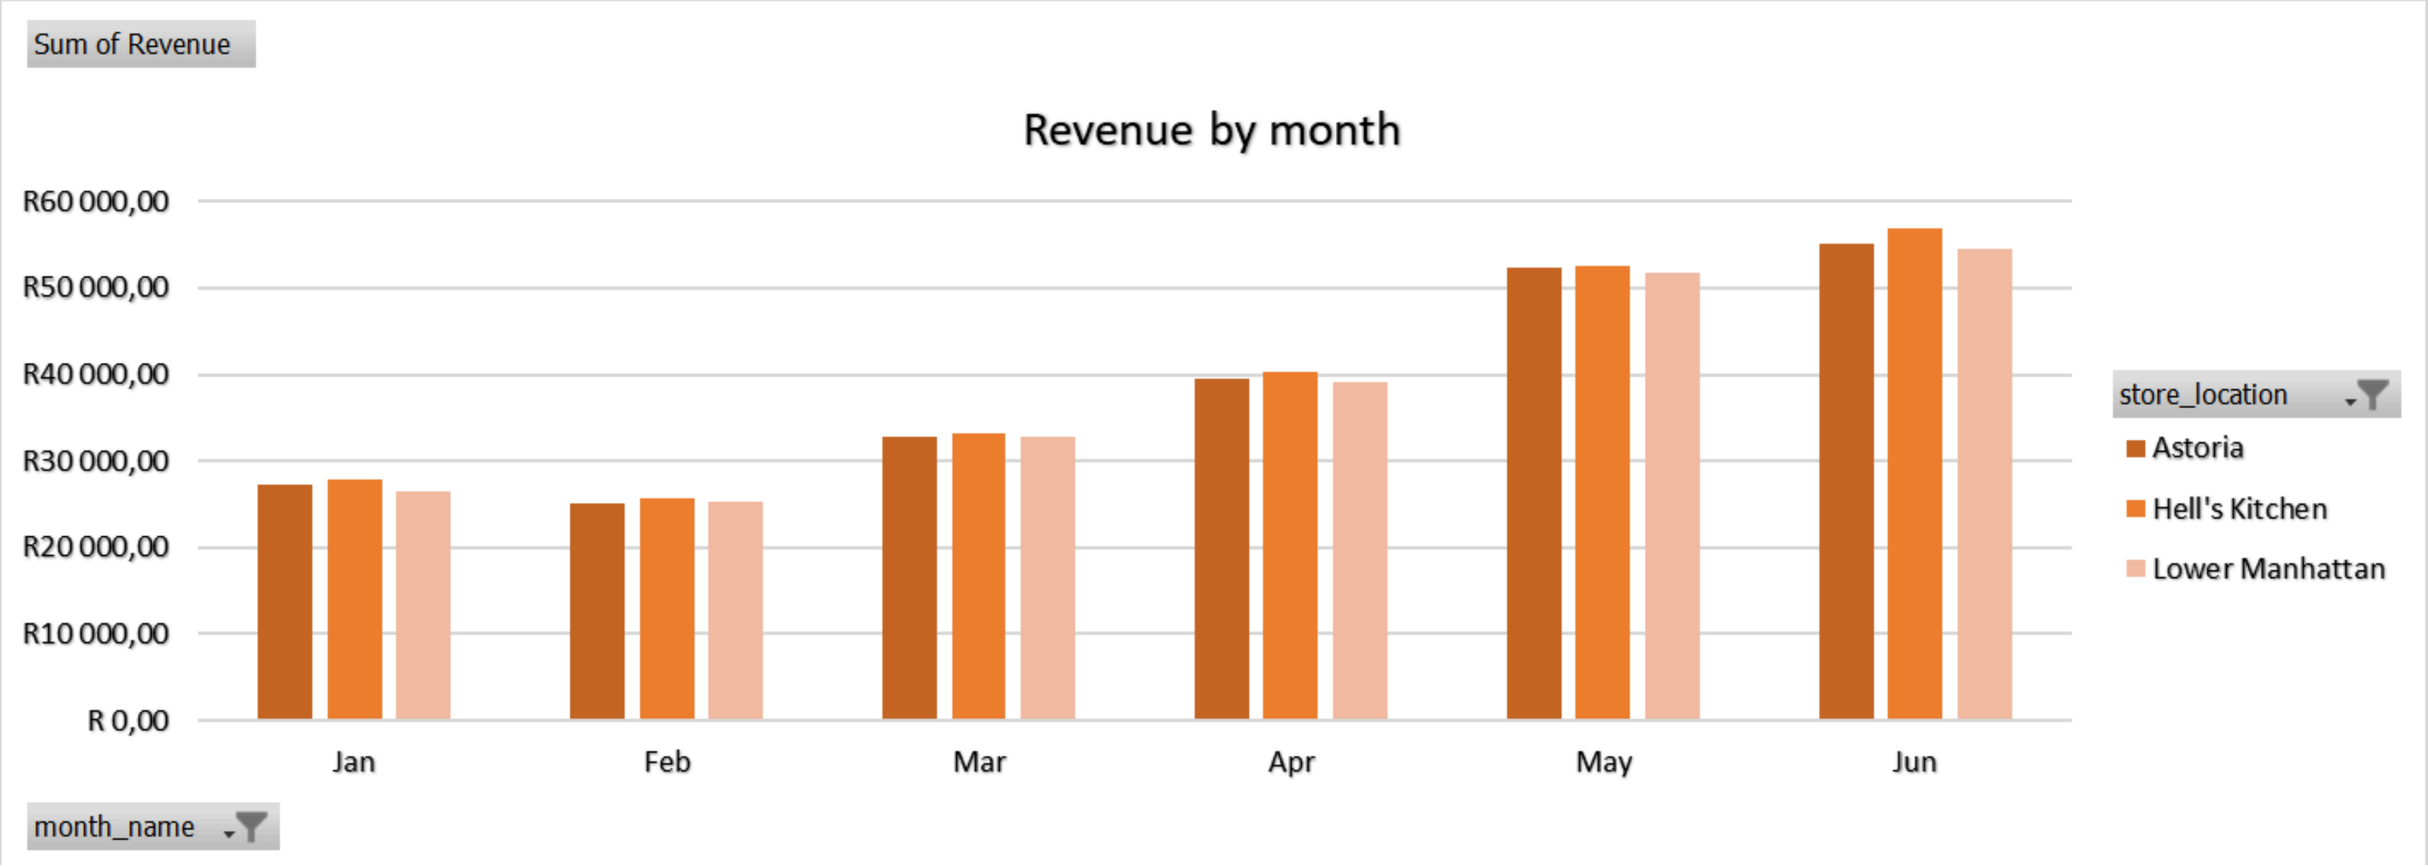
Bright coffee shop Analysis

where every cup shared is an experience not rushed

created by Premrose Baloyi

Revenue Analysis| Store location and month

insights: Revenue across all the stores has increased by 50% in the month of June as compared to January. And the reason behind this could be a seasonal change that is impacting the sales.



Revenue Analysis| Store Location & Time of Day

- rush hour sales contributes more high number of sales, and mid-morning sales contributes 56% of the sales followed by afternoon which contributes 30% of the sales, but the night contributes the lowest sales. reason could be more people prefer coffee in the morning to kick-start their day.

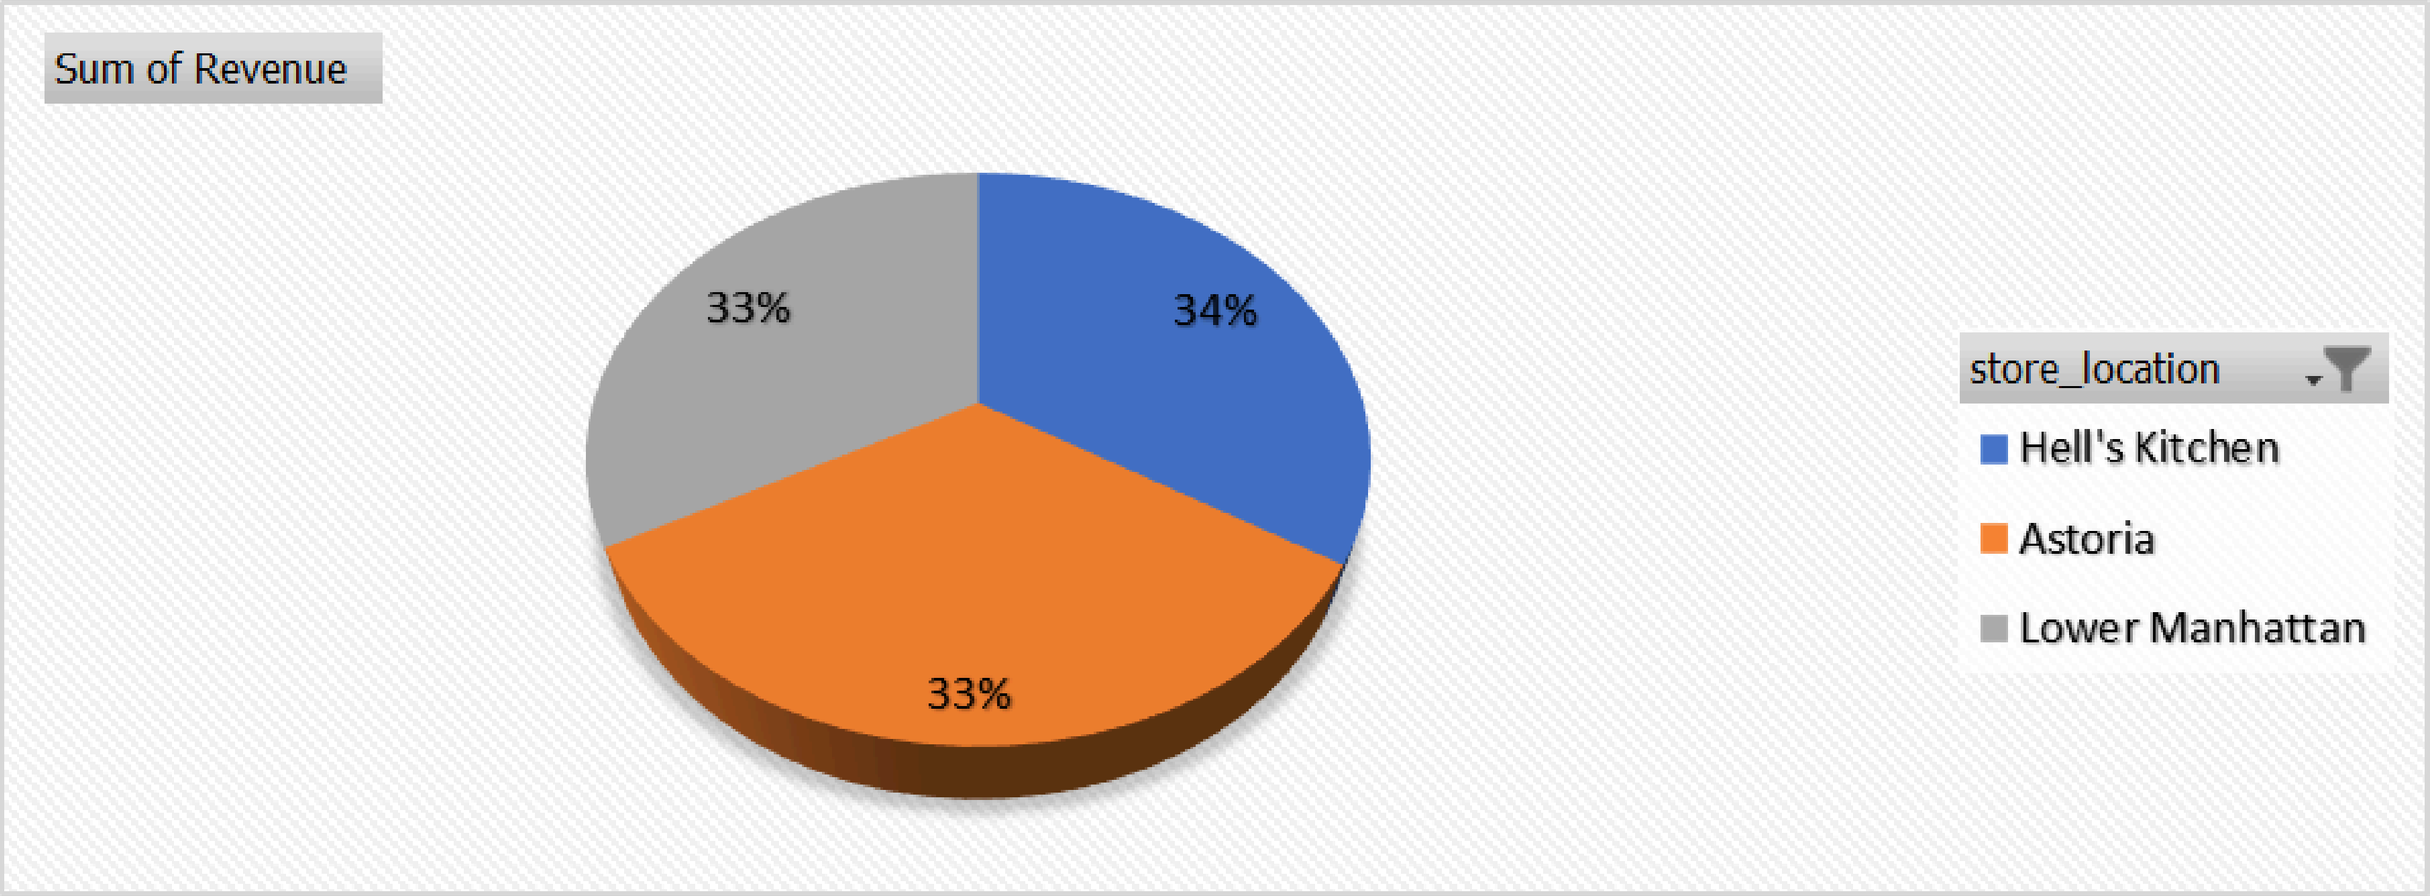
Sum of Revenue

	Astoria	Hell's Kitchen	Lower Manhattan
01. Rush Hour	R73 817,85	R79 816,64	R95 782,18
02. mid morning	R63 107,82	R84 406,64	R72 647,60
03. Afternoon	R62 456,29	R47 021,95	R54 119,84
Night	R32 861,95	R25 265,94	R7 507,63

store_location

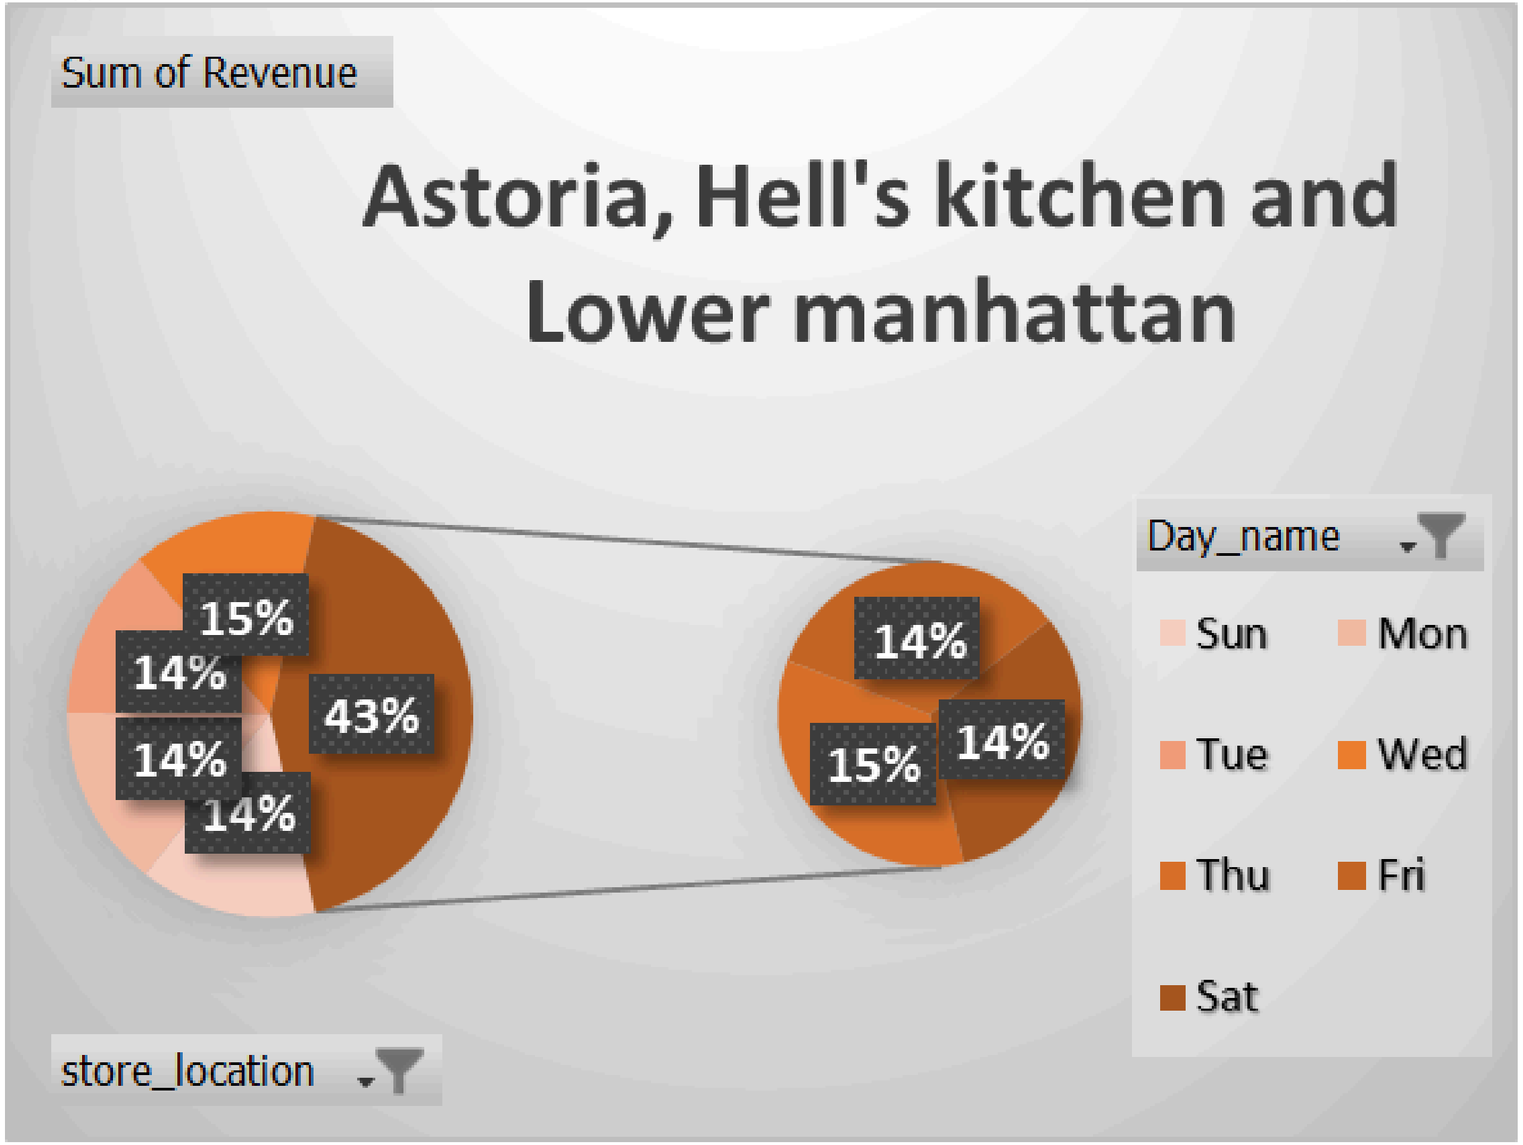
Revenue analysis | Revenue by store location

- **insights**: Hells kitchen has more sale and contributes 34% of sale and both Astoria and LowerManhattan contributes 33% of the overall.



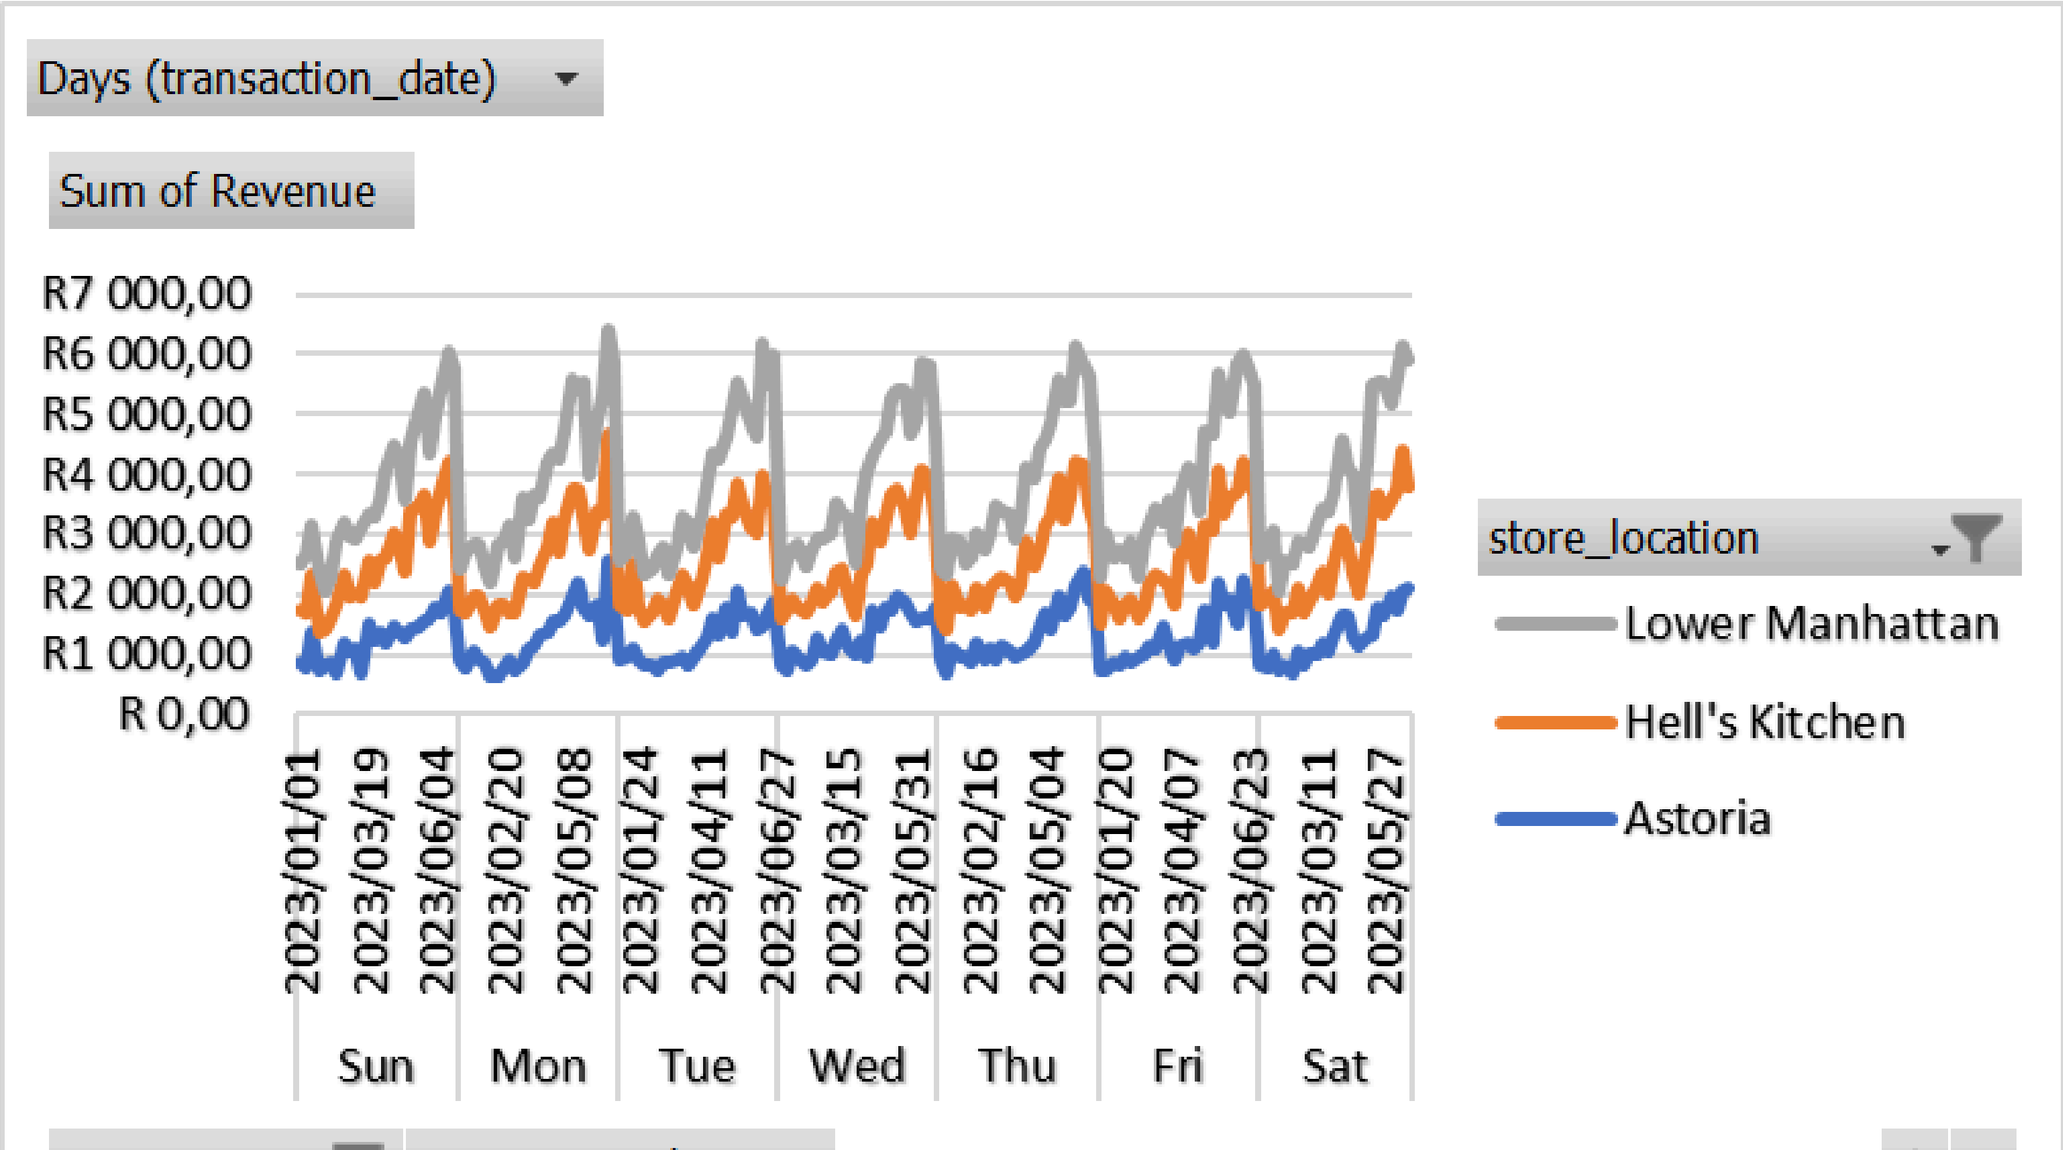
Revenue Analysis| sales in stores by weekdays

insights: saturday has more sales than any other day because it ctributes 43% of the sales.



Revenue Analysis| revenue by day of the month

insights: The highest sales are done by the end of the month and the lowest are at the 20th



conclusion /overview of the visualised results

The results demonstrate that the sales vary from month to month on a daily basis, in the beggining of the month as demontrated using the month-name and store visualisation graph, we gain that the sales are higher, probably because people got payed and the sales are most likely to be high in the morning because people prefer to kick start their day with a little bit of caffeine.
